FedorDeveloper

## TECH STACK

- Java 8, 11, 17+
- Spring Boot, Spring Security
- Git
- Maven, Gradle
- JPA, Hibernate
- ELK, Grafana, Prometheus
- BPMN, UML 2.0
- REST API
- Docker, Docker Compose
- SQL (PostgreSQL), NoSQL (Redis)
- API Gateway
- Apache Kafka
- Swagger
- React, JS, CSS, HTML

## SOFT SKILLS

- Team Work
- Problem Solving
- Analytical Thinking
- Conflict Resolution
- Diligence
- High Learnability

## LANGUAGES

- Russian (C2)
- Belarusian (C1)
- English (B2)

## PROFILE

Java developer with system design and web applications development experience. Specialized in building reliable and testable solutions based on microservice architecture, implementing CI/CD, system monitoring, and interservice integration. Worked on Scrum teams, participating in architectural planning and end-to-end feature implementation.

**Experience:** 2 years(2023 - 2025)

## PROJECTS

### Modsen — TMS (Test Management System) (2025)

#### System Analyst/Backend Developer Assistant

Worked as system analyst with backend of the project, aimed at optimizing test management processes for corporate clients. Conducted requirement analysis, system modeling and documented new features and third-party integrations.

##### Results:

- Developed UML & ERD diagrams for system model, ensuring the correspondence between business requirements and database structure.
- Created comprehensive documentation for Jira integration, including API specification.
- Enhanced system security by reviewing and validating the role-based model, addressing 5 access rights vulnerabilities.
- Improved communication between project teams by consolidating requirements using Confluence, Miro and ClickUp.

### Modsen — Taxi Aggregator (2024)

#### Java Back-end Developer

Developed taxi aggregation platform using Java + Spring Boot to build microservice architecture system. Implemented end-to-end backend solutions, including service design, creation of data layer, test writing and monitoring integration.

##### Results:

- Designed and deployed 15 microservices for order, drivers, rides, passengers and reviews management.
- Achieved ~3000 parallel queries per second in test environment.
- Applied TDD and multi-level testing using JUnit, Mockito & Testcontainers.
- Integrated system monitoring using ELK, Grafana & Prometheus.

### Pizza Ordering Web App (2023-2024)

#### Full-stack Java Developer

Web application based on React + Spring Boot with responsive UI and reliable data synchronization.

##### Results:

- Developed responsive UI and scalable backend, maintaining data consistency and synchronization.
- Participated in 2-week Scrum sprints, implementing new features with fast iterative approach.
- Maintained comprehensive up-to-date documentation for API Endpoints.

## EDUCATION

### Software Engineer

2021-2025

BSUIR (Software of Information Technology major)

**GPA:** 8.4 / 10.0
