

FYODOR SAPRANKOV

JAVA SOFTWARE ENGINEER

CONTACTS

- +375 (44) 795-42-97
- fedor.sap@gmail.com
- Minsk, Belarus
- fedordev
- realfyodor
- FedorDeveloper

TECHNOLOGIES

- Java 11+, Spring Boot, Spring Security
- Maven, JPA, Hibernate
- SQL (PostgreSQL), Redis, MongoDB
- ERD/UML, Jira, Confluence
- Swagger/OpenAPI
- Apache Kafka
- ELK, Grafana, Prometheus
- Docker, Docker Compose, Linux, Nginx, HTTP, REST API
- API Gateway, Keycloak
- React, JS/TS, CSS, HTML, Dev Tools
- Git, CI/CD, Kubernetes
- Python (scripting)

SOFT SKILLS

- Team communication
- Incident handling
- Analytical thinking
- Attention to details
- Fast learning

LANGUAGES

- Russian (C2)
- Belarusian (C1)
- English (B2)

PROFILE

Backend engineer with experience in building and maintaining microservices, integrations, and high-load services. Confident in Java and the Spring ecosystem, applying OOP, SOLID, and design patterns. Skilled in API design, query optimization, and monitoring. Quickly adapt to new stacks and contribute to team development.

Development experience: 2 years (2023 - 2025)

ОПЫТ РАБОТЫ

Modsen — Java Back-end Engineer / System Analyst (2025)

Designed server logic and data models, developed backend integration flows, and ensured security of the role model in the TMS (Test Management System) — a platform for managing, analyzing, and running QA test cases and suites.

Key tasks: Created ERD/UML diagrams, built API endpoints, validated the role model and integration flows against access policies, and eliminated identified security issues.

- Prepared 5 UML/ERD models and documented 12 API integrations, reducing clarification requests and requirement transfer time between teams by 20% through structured documentation in Confluence;
- Detected and fixed 5 critical role-model vulnerabilities, fully preventing incorrect access scenarios;
- Found 15 defects during functional testing, 4 of them critical, accelerating delivery of safe features.

Technologies: Java 17, Spring Boot, Spring Security, UML, ERD, Confluence, Jira Server, Miro, REST API, PostgreSQL, Docker, Docker Compose, Postman.

Modsen — Java Back-end Engineer / Application Support (2024)

Developed and improved Java microservices, analyzed distributed system behavior, optimized queries, and maintained the reliability of core backend modules.

Key tasks: Deployed Java microservices in Docker containers, optimized SQL queries, fixed functional issues, and configured system monitoring.

- Reduced L2 incidents by 20% through improved log structure, metric analysis, and timely fixes;
- Maintained >99.9% availability under loads up to 3000 RPS; optimized SQL queries in three services, reducing endpoint latency by 20-35%;
- Implemented Prometheus metrics, increasing monitoring coverage to 70%.

Technologies: Java 11, Spring Boot, Spring Security, PostgreSQL, Redis, Kafka, ELK(Elasticsearch, Logstash, Kibana), Docker, Docker Compose, Kubernetes, CI/CD, Swagger, Testcontainers, Junit, Cucumber, API Gateway, Keycloak, ClickUp.

Modsen — Full-Stack Engineer (2023-2024)

Developed a Java & React web application, designed the data structure, implemented server APIs, and ensured correct interaction between backend and client logic.

Key tasks: Built backend and API with real-time features, created responsive UI with React, designed DB schema and documentation, set up CI pipelines for automated builds and testing.

- Built backend and API reducing endpoint response time to <100 ms; implemented real-time updates for the orders page, reducing errors by 35%;
- Designed the ERD model enabling faster feature delivery and improving query efficiency by 25%;
- Configured CI pipelines, reducing manual build time by 80%.

Technologies: Java 8, Spring Boot, Spring Security, React, JavaScript, Material UI, Dev Tools, HTML, CSS, PostgreSQL, ClickUp.

EDUCATION

Software Engineer

BSUIR - speciality "Software Engineering In IT"

GPA: 8.4 / 10.0

2021-2025
